

Mobile Sales Analysis

Prepared By: Nikita Sharma

Role: Data Analyst Portfolio Project

Project Overview

The **Mobile Sales Analysis Dashboard** project was developed to analyze mobile sales performance using **Microsoft Excel and Power BI**. The objective of this project was to monitor sales trends, evaluate customer purchasing behavior, and visualize key business metrics through an interactive dashboard. The dashboard enables users to explore sales performance using filters and interactive visualizations, supporting data-driven business decisions.

Dataset Summary

Dataset Information

- **Dataset Name:** Mobile Sales Dataset
- **Total Records:** 3,836
- **Total Columns:** 14
- **Dataset Type:** Structured Sales Dataset

Features

- **Transaction Information:** Transaction ID, Day, Month and Year
- **Product Information:** Brand, Mobile Model
- **Customer Information:** Customer Name, Customer Age
- **Location Information:** City
- **Sales Information:** Units Sold, Price Per Unit
- **Payment Information:** Payment Method
- **Customer Feedback:** Customer Ratings

Data Preparation

- Verified the dataset for consistency before analysis.
- Checked and validated the data types of all columns.
- Combined the **Day, Month, and Year** columns into a single **Date** column to enable time-based analysis in Power BI.
- Imported the transformed dataset into Power BI for dashboard development.

Dashboard Overview

Interactive Dashboard

An interactive dashboard was developed in **Power BI** to visualize sales performance, customer purchasing behavior, and product trends. The dashboard provides dynamic filtering and enables users to analyze business performance from multiple perspectives.

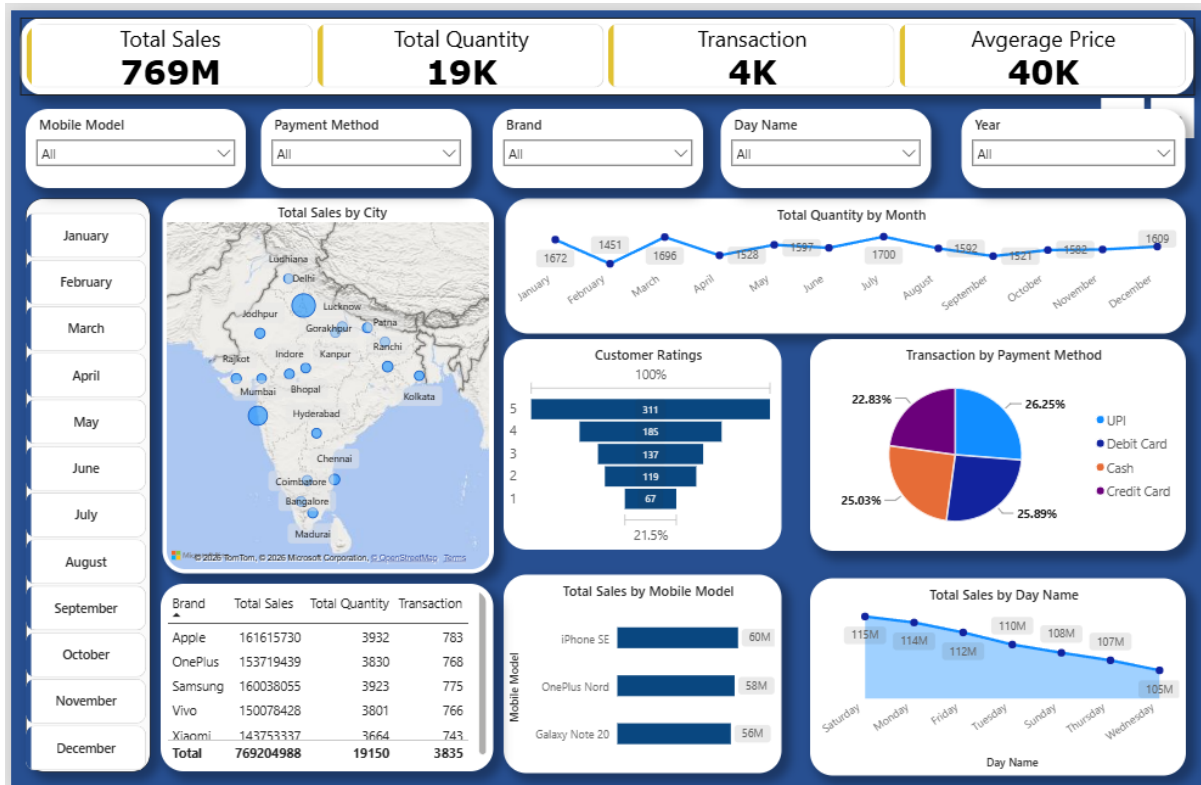

Dashboard Components

- KPI Cards
 - Total Sales
 - Total Quantity Sold
 - Total Transactions
 - Average Price
- Total Sales by City
- Total Quantity by Month
- Customer Ratings Distribution
- Transactions by Payment Method
- Sales by Mobile Model
- Sales by Day Name
- Brand-wise Sales Table

Interactive Filters

- Mobile Brand
- Month

- Payment Method
- Day Name

Business Recommendations

1. Maintain adequate stock of Apple products, especially the iPhone SE, to meet customer demand.
2. Review the performance of low-selling models such as OnePlus 9, Vivo S1, and Redmi 9 to identify opportunities for improving sales.
3. Focus on high-performing markets like Mumbai while developing strategies to increase sales in other cities.
4. Plan promotional campaigns during weekends and high-demand months such as July to maximize sales.
